14	B. Venkatesh	Devops Engineer

• CQ mail is a secure, user-friendly email platform like Gmail, developed by Camel Q Software Solutions.

• It will include features such as user registration, inbox, sent, drafts, spam, attachments, and real-time notifications. Built with Next.js for the frontend and Nest.js for the backend, it will use SMTP/IMAP protocols for email handling and secure authentication with JWT/OAuth.

• The system will provide full data control, scalability, and an admin panel for management, creating a professional branded email service.
